36" Wide Bottom Freezer Refrigerator

PLANNING GUIDE

PRODUCT DIMENSIONS

- ◇ The depth from the front of the door (w/o door handles) to the back of the refrigerator chassis is 27 1/8" (689mm).
- ◇ The depth of the cabinet without door is 24" (610mm).
- ◇ The power cord is 40" (1016mm) long.
- ◇ The height from the top of the refrigerator to floor with the leveling legs in the down position is 70 1/8" (1781mm)
- ◇ The height from the top of the refrigerator to floor with the leveling legs in the fully extended position is 71 1/4" (1810mm) at the front of the unit and 70 11/16" (1796mm) at the rear of the unit.
- ◇ The width of the refrigerator from edge to edge is 35 5/8" (905mm).

DOOR SWING DIMENSIONS

The area to the left and the right of the appliance must permit both doors to open to a minimum of 90°. Allow a minimum of 2 1/2" (64mm) space between the side of the refrigerator doors and a corner wall.

WATER SUPPLY REQUIREMENTS

- ◇ All installations must meet local plumbing code requirements.
- ◇ Connect to 1/4" (6mm) copper line to the house cold fresh water supply.
- ◇ Use a shut off valve between the refrigerator and supply. The shut off valve should be a drilled saddle valve.
- ◇ Do not use a self-tapping valve which reduces water flow and clogs more easily.
- ◇ Allow a minimum of 24" (610mm) diameter service loop of copper tubing outside the wall or floor for easy connection to the water supply.

Cold water supply

Connect the ice maker to a cold water line with water pressure between 30 and 120 PSI. If you have any questions about your water pressure, call your utility company.

IMPORTANT:

- ◇ In homes with a Reverse Osmosis water treatment system, remove the water inlet connector from the "yellow" valve and attached to the "blue" valve. Make sure the water filter bypass plug is in place.

ELECTRICAL REQUIREMENTS

A 115VAC, 60 Hz, 15 Amp circuit breaker and electrical supply are required. A separate dedicated non-GFCI circuit, servicing only this appliance, is required.

Your Dacor® refrigerator is equipped with a 40" (1016mm) 3-prong grounded power cord, which must be plugged into a 3-prong grounding-type non-GFCI wall receptacle. Follow the National Electrical Code and local codes and ordinances when installing the receptacle.

IMPORTANT: A ground fault circuit interrupter (GFCI) is not recommended and may cause interruption of operation.
