# Introduction

## ABOUT THE SABBATH MODE

This feature was designed for use on the Jewish Sabbath and Holidays. The Sabbath Mode feature makes it possible for observant Jews to refrigerate and freeze food during the duration of the holiday. When set, the Sabbath Mode feature will override typical reactions to actions in your refrigerator.

While in Sabbath Mode your refrigerator will still operate normally, but the refrigerator will not respond to your actions. The fan may or may not be running when the door is opened; however, this is not a result of your actions. The fan will operate at random times.

### Defrost Heater

- The defrost heater will continue to defrost the refrigerator and freezer.
- The defrost heater will be activated on a fixed timer during Sabbath Mode. Defrost heater will not defrost as a result of door openings or any action by the consumer.

### Displays and Alarms

- The main temperature control and Quick Chill or Express Chill displays will not be lit. The touch pad sensors will not sound a tone or operate to change the set temperature when in Sabbath Mode.
- The temperature and Quick Chill settings will remain at the previously set temperatures during and after Sabbath Mode.
- Door alarms will not operate while in Sabbath Mode.

### Ice and Water Dispenser

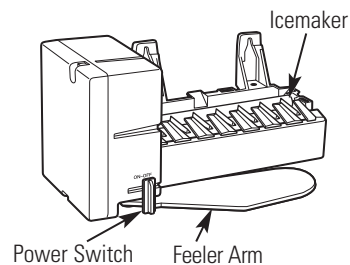

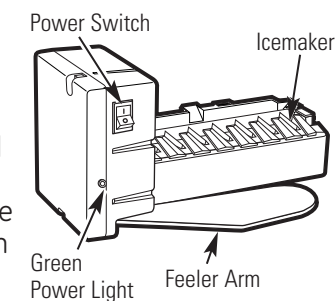

- The proximity sensor and dispenser touch sensor icons on the ice and water dispenser will not operate.
- Ice and water cannot be retrieved from the dispenser while the refrigerator is in Sabbath Mode.

### Lights

- Interior lights and dispenser light will not operate.

### Icemaker

- The icemaker is automatically disabled in Bottom-Freezer models.
- The icemaker will continue to operate in Side-by-Side and All-Freezer models, but should be disabled by opening the ice bin door and by setting the icemaker power switch to **O (off)** or **OFF**.
- To obtain ice, open the freezer door and remove the cubed ice from the ice bin.

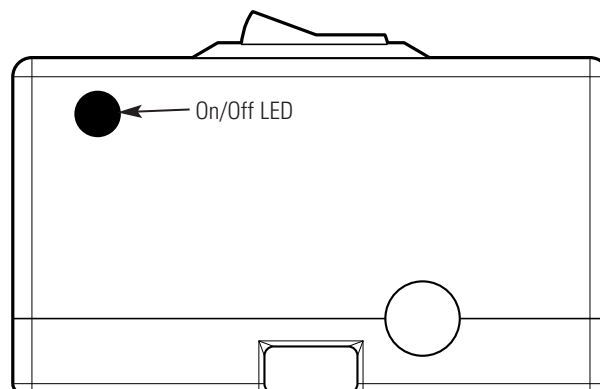

# Introduction

## USING THE SABBATH SWITCH

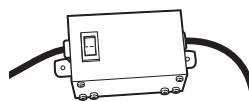

- To activate the Sabbath Mode feature, raise the top grille panel and set the Sabbath Mode switch to the ON position.
- When the refrigerator is in Sabbath mode, a green LED light will be visible.

**On Side-by-Side Refrigerators**, the green light will be visible between the top grille panel and the refrigerator door.

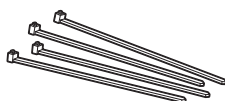

**On Bottom-Freezer Refrigerators**, the green light may not be visible with the top grille panel closed. If you are not sure if the unit is in Sabbath Mode, raise the grille panel to see if the green light is on.
