

Scratch-B-Gone Grill Restoration Kit

Remove scratches and stubborn stains from your stainless steel outdoor kitchen equipment.

Product Features

ULTRA SHINE™, a proprietary conditioning formulation lets you remove isolated scratches locally and speeds the oxidation of the newly restored metal to blend perfectly with surrounding areas. This means you don't have to resurface the entire grill to obtain a universal matched finish.

Specially developed pads contain various specific 'metal cutting mineral grits' which aggressively cut and channel into stainless steel to create a matching grain finish.

SEEING IS BELIEVING! The video CD in every kit shows you just how easy it is to expertly remove scratches, no matter how deep.

Warning

DO NOT attempt to use the Scratch-B-Gone tools on polished stainless steel surfaces. This tool is intended for resurfacing of brushed 'real' stainless steel surfaces only. Read and review thoroughly the materials that come with your Scratch-B-Gone purchase before beginning.
